

Next generation protection for industrial ethernet networks

Powering Business Worldwide

Defence in depth for a wide range of DCS, PLC, SCADA, networking and automation systems

Protect your control system against network problems and cyber threats. You may never be attacked by a serious hacker, but typical control networks are also extremely vulnerable to simple day to day security and reliability issues. Poor network segmentation, unprotected points of entry into the network, 'soft' targets such as un-patched PCs and vulnerable PLCs, and human error can result in significant production losses and even safety issues. So perimeter defence is not enough!

Reducing costs

Protecting from cyber threats

Maximising availability and reliability

The **9202-ETS** is our next generation **MTL Tofino™** security system and continues to provide the highest level of network security for process automation applications. It is exceptionally easy to install compared with alternative systems and includes the latest configurator software and built-in modules (Firewall & Event Logger) to protect industrial networks from cyber-security vulnerabilities. This maximises plant uptime and process availability while protecting it from both intentional and unintentional security incidents.

9202-ETS Key features

Robust metal housing
designed for harsh industrial environments

Loadable security modules (LSMs)
provide additional layers of security

Tofino configurator (TC)
free software with intuitive user-friendly interface

USB connectivity with a secure USB port for configuration and diagnostics

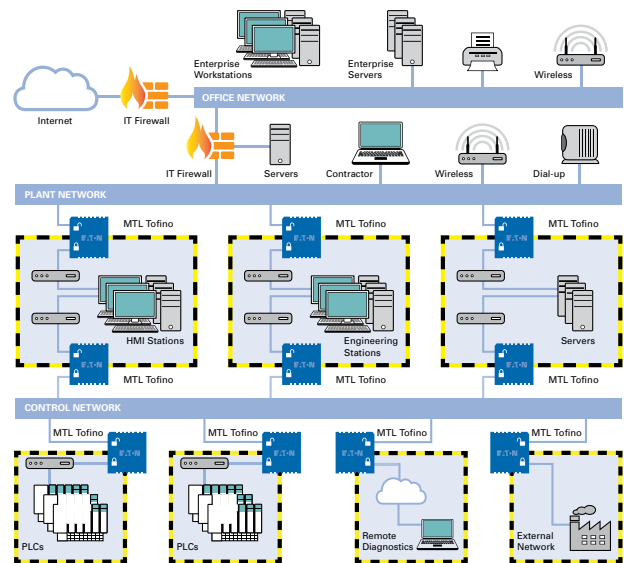

DIN-rail mounting
for quick and simple installation

Plug 'n' play with no pre-configuration upon installation and simple setup

Unique 'Test' mode
allows firewall testing with no risk to operations

Ease of accessibility
with multiple front facing interfaces

Zones and conduits provide defense in depth

Adding further customer value to our existing Tofino™ solution
